Data sheet

Application

The MIC-2 MKII multi-instrument is a microprocessor-based measuring unit providing measurement of most electrical quantities on a 2- or 3-phase electric energy distribution network. The measurements are shown on the built-in display.*1

MIC-2 MKII can be used as a data logging device for an intelligent Power Distribution System or Plant Automation System. All measurements are monitored and data is available via the RS-485 Modbus port. Other communication types as Ethernet (Modbus TCP/IP, HTTP, FTP, SMTP, SNTP) and Profibus DP are available options.

True RMS values are measured with/without neutral and with both balanced and unbalanced load.

A large number of standard analogue instruments can be replaced by the MIC-2 MKII in all electrical measuring applications. The MIC-2 MKII contains all necessary measuring circuits and presents all values on a display with white backlight. The display has 4-digits resolution for all measurements. The backlight duration is selectable. *1

Operating the MIC-2 MKII is very easy. It is a flexible and logical measuring unit that enables the user to easily adapt the instrument to individual applications. Password protection of KWh counter reset and change of settings is possible.

Connection

The MIC-2 MKII can be used in 2- and 3-phase network topologies with/without neutral and with both balanced and unbalanced load, including the US split phase system. The voltage and current input wiring modes are set separately in the parameter setting process. Please refer to the wiring diagram section in the MIC-2 MKII Installation Instructions for more details.
