

DATA SHEET

Voltmeters and Ammeters, Moving iron (type EQ)

- 90° pointer deflection
- Standard DIN sizes
- Quadratic instruments Q48, Q72, Q96, Q144
- Accuracy class 1.5
- Exchangeable scale

Application

Moving-iron instruments are intended for installation in panels of power distribution or wherever AC current or AC voltages are to be measured.

The EQ measures R.M.S. values in frequency range 16 to 65 Hz (possible calibration for other frequency ranges).

Example: standard EQ96, 0-600/5 A (CT)

Example standard EQ96, 0-500 V

Available variants

Standard variants

Standard variants have fixed measuring ranges and scales. Neither customisation nor options are possible.

Custom variants

If you require ranges or scale designs outside our standard program, then you must select a custom variant. Custom variants will be customised on customer request.

Standard variants

Custom variants

Options	Anti-glare glass
	Glass with red adjustable pointer (IP52 only)
	IP54 protection including sealing and rubber gasket
	Calibration certificate
	Specific mounting angle
Scale design	Optional graphics <ul style="list-style-type: none"> - Coloured lines (red, green, yellow) - Coloured section (red, yellow, green) - Coloured figures (red, green, yellow) - Application text (black, red, green, yellow) - Ammeters' overload range: 3, 4, 5 or 6 times overload
	New scale design
Measurement	Non-standard voltage measuring range (within data sheet limits)
	Adjusted for DC measurement for moving iron instrument
	Adjusted to specific frequency voltage input only (100 to 500 Hz)

Adjustable red pointer

Example: standard EQ96, 0-600/5 A (CT) user-adjustable pointer. This pointer limits the front protection to IP52.

Optional IP54 protection

This includes special sealing of the housing and a fitting gasket. The gasket itself is not enough to secure IP54 protection.

IP54 protection includes sealing and rubber gasket.

Scale design

Optional graphics

A scale design is made with the following elements:

1. Logo
2. Symbols
3. Measurement type
4. Measurement area and overload
5. Graphic elements (extra text, coloured marking)
6. Other graphical elements (red line)

New scale design

Typically, this is for customers who needs their own specific scale design or/and a design that differentiates from the DIN standard. The design is stored in the DEIF database and ensures that orders can easily be repeated.

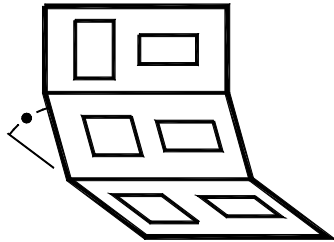

Separate scales

As the scales are user-changeable, separate scales can be ordered separately if needed.

Exchange of scale

- 1) Press cover at top of instrument as shown.
- 2) Remove scale by means of a suitable tool (for example a screwdriver).
- 3) After exchange of scale: refit cover (press till it snaps into place). Calibration is not needed.

Note: Interrupt signal to terminals before exchanging the scale.
